**The world’s first International Standard dedicated to helping organizations take action on biodiversity launched today in Rwanda**

ISO 17298: Biodiversity for organizations – Guidelines and Requirements is a new standard providing, for the first time, a practical, scalable framework to help organizations assess their biodiversity impacts, dependencies, risks and opportunities.

Biodiversity - the variety of life on Earth - is essential to the health of ecosystems, economies, and communities. As nature loss accelerates, ISO’s new standard offers a vital tool to help organizations take measurable, accountable action to protect and restore biodiversity.

When biodiversity is lost, businesses face higher operating costs, disrupted supply chains, regulatory and reputational risks. Acting on biodiversity empowers organizations to strengthen operations, access nature-positive finance, build trust with customers, regulators, and society.

ISO Head of Sustainability and Partnerships, Noelia Garcia Nebra, said by integrating biodiversity into organizational strategies and operations, large-scale, systemic change can happen where it matters most.

Many organizations see the urgency of biodiversity action, but navigating the path can be complex. Until now, there has been no globally agreed standard for organizations to integrate biodiversity into their strategies and operations,” Ms Garcia Nebra said.

“This lack of a common framework has contributed to fragmented approaches and growing confusion as nature-related risks and expectations increase.

ISO 17298 addresses this gap by offering a structured roadmap that enables organizations to assess biodiversity-related impacts and consider these effectively in their strategies. The standard embeds biodiversity into core governance and risk management practices - not just sustainability reporting - ensuring alignment with global expectations and organizational operations.
